ART UNIT	PAPER NUMBER
----------	--------------

2164

DATE MAILED: 08/18/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	10/622,572		TAKAHASHI ET AL.	
	Examiner		Art Unit	
	Phuong-Thao Cao		2164	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 June 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15, 29, 30, 33 and 34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15, 29-30 and 33-34 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 21 July 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is in response to Amendment filed on 6/2/2006.
2. Claims 16-28 and 31-32 have been cancelled, and claims 1-8, 10-12, 14-15, 29 and 33-34 have been amended. Currently, claims 1-15, 29-30 and 33-34 are pending.

Information Disclosure Statement

3. The reference AW, entitled "Digestor: Device-independent Access to the World Wide Web", cited in the Information Disclosure Statement (IDS) filed March 16, 2005 has been received and considered. A copy of the reconsidered IDS is enclosed with this office action.

Response to Arguments

4. Applicant's arguments with respect to claims 1-15, 29-30 and 33-34 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

5. Claims 1 and 14 are objected to because of the following informalities: in claim 1, "the type information" in line 13 is believed to be "the terminal type information"; in claim 14, "at least one of a terminal type information, profile information" is believed to be "at least one of the

Art Unit: 2164

terminal type information, language information or profile information”. However, appropriate correction is required.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-4, 6, 9, 11-12, 14-15, 29-30 and 33-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Adachi (Japanese Publication No 2000-285052).

As to claim 1, Adachi teaches:

“An information processing apparatus connectable to a terminal through a network (see Detailed Description, paragraphs [0001], [0005], [0006] and [0012], wherein a client is equivalent to Applicant’s “a terminal”), said information processing apparatus comprising:

“a reference Web information generating part specifying at least one of a terminal type, language or profile of the terminal based on first request requesting Web information, said first request sent from the terminal through the network” (see Detailed Description, [0013]-[0015] and [0018] and Drawing 5, wherein URL inverter or converter is equivalent to Applicant’s “reference Web Information generating part”, client is equivalent to Applicant’s “terminal”, and

Art Unit: 2164

the URL acquisition demand from a client is equivalent to Applicant's "first request sent from the terminal"); and

"a communicating part sending the reference Web information to the terminal as a response with respect to the first request" (see Detailed Description, [0013]-[0014] discloses a means for returning the URL information after conversion to said client wherein the converted URL information is equivalent to Applicant's "the reference Web information", which indicates the inclusion of a communicating part as illustrated in Applicant's claim language; also see [0018]);

"wherein the reference Web information generating part generates reference Web information" (see Detailed Description, [0013]-[0014] and [0018] wherein URL inverter or converter is equivalent to Applicant's "the reference Web information generating part", and URL information or URL of the conversion result is equivalent to Applicant's "reference Web information")

"that includes a reference path created by adding common path information indicating at least one of the terminal type information, language information or profile information wherein at least one of the type information, language information or profile information shows at least one of a specified terminal type, language, or profile, and wherein the path is indicated in the first request for accessing the Web information" (see Detailed Description, [0018], [0020], [0023]-[0025] and Drawing 5, wherein the converted or changed URL is equivalent to Applicant's "reference path"); and

"that allows the terminal to automatically access Web information specified by the reference path" (see Detailed Description, [0023] and [0029]-[0032] which disclose

that appropriate Web information is automatically accessed using the returned URL wherein returned URL is equivalent to Applicant's "reference path"); and "the communicating part receives a second request for requesting the Web information specified by the reference path" (see Detailed Description, [0029]-[0032] wherein each of retrieved URL is equivalent to Applicant's "reference path", and a mouse button click on any link of the result URL list is equivalent to second request as illustrated in Applicant's claim language, and a communicating part must be included to communicate and respond to the request as disclosed).

As to claim 2, this claim is rejected based on arguments given above for rejected claim 1 and is similarly rejected including the following:

Adachi teaches:

"a plurality of other Web information generating parts generating other Web information other than the Web information, said other Web information linked from the Web information by a relative path, wherein the plurality of other Web information generating parts refer to the common path information when the other Web information is requested" (see Means, [0033]-[0035] wherein each documentation management system or Web server is equivalent to Applicant's "other Web information generating part", the disclosure of document is accessed via a web server implies a link by a relative path, and the conversion program on the web server must refer to URL information (equivalent to Applicant's "common path information) according to the environment of the client such as type of the browser to change document into format which can be displayed by the browser; Moreover, plurality of data sources (such as documents,

Art Unit: 2164

web pages, images, etc) on the Web server can be considered as other Web information generating parts or other Web information, then these data sources can be linked through a relative path),

“wherein when said communicating part receives the first request from the next work, said communicating part additionally provides a default value for at least one of the terminal type, language or profile, indicated in the common path information and a reference Web information identification as a relative path information for identifying said reference Web information generating part to the path for the Web information indicated in the first request” (see Detailed Description, [0008], [0012]-[0015] and [0033], and Drawing 5), and

“said reference Web information generating part is executed by the reference Web information identification additionally provided by the communicating part and replaces the default value with the at least one specified terminal type, language or profile” (see Detailed Description, [0014]-[0015] and Drawing 5, wherein URL inverter is equivalent to Applicant’s “reference Web information generating part”).

As to claim 3, this claim is rejected based on arguments given above for rejected claim 2 and is similarly rejected including the following:

Adachi teaches:

“wherein said communicating part create the reference path by adding the default value for the common path information before the Web information identification for identifying the Web information in the path for the Web information indicated in the first request” (see Drawing

Art Unit: 2164

5, line 14, for *http://aaa.com/English/Index.html* which is a URL of the first request wherein *English* is the default language value and *Index.html* is a Web information identification).

As to claim 4, this claim is rejected based on arguments given above for rejected claim 2 and is similarly rejected including the following:

Adachi teaches:

“a Web information generating part generating a Web information” (see Detailed Description, [0023] wherein the disclosure of the image for accessing in the Web indication the inclusion of a Web information generating part as illustrated in Applicant’s claim language; also see [0033] for information accessible by URL); and

“a display information generating part generating a Web page by describing the Web information corresponding to the terminal in a display format for display the Web information at the terminal based on the common path information indicating at least one of the terminal type information, language information or profile information obtained from the reference path indicated by the second request” (see Detailed Description [0023], [0027] and [0033] wherein conversion program functions as a display information generating part as illustrated in Applicant’s claim language; also see [0037]).

As to claim 6, this claim is rejected based on arguments given above for rejected claim 4 and is similarly rejected including the following:

Adachi teaches:

“wherein when one of the other Web information generating part corresponding to the other Web information generates the other Web information in response to a third request for requesting the other Web information selected by a user at the terminal displaying the Web information, said display information generating part generates the Web page for displaying the other Web information suitable for the terminal at the terminal, based on the terminal type information set in the reference path” (see Means, [0031]-[0034] wherein client or browser is equivalent to Applicant’s “terminal”, and conversion program is equivalent to Applicant’s “display information generating part”).

As to claim 9, this claim is rejected based on arguments given above for rejected claim 6 and is similarly rejected including the following:

Adachi teaches:

“a image forming part forming a image” (see Detailed Description, [0023] wherein the disclosed image must be formed from a image forming part as illustrated in Applicant’s claim language); and

“an image formation controlling part controlling said image forming part” (see Detailed Description, [0023] wherein the disclosure of accessing the image of suitable amount of information according to the version of OS of the client implies the inclusion of an image formation controlling part as illustrated in Applicant’s claim language),

“wherein at least one of said Web information generating part and said other Web information generating part obtaining information concerning said image forming part from said

Art Unit: 2164

image formation controlling part and generates the Web information based on the obtaining information” (see Detailed Description, [0023]).

As to claim 11, this claim is rejected based on arguments given above for rejected claim 6 and is similarly rejected including the following:

Adachi teaches:

“wherein said display information generating part generates the Web page displaying the Web information or the other Web information generated by said Web information generating part or said other Web information generating parts, in a font size suitable for the terminal, based on the common path information indicating at least one of the terminal type information, language information or profile information set based on the reference path in common” (see Detailed Description, [0023]-[0025] and [0032] and Drawing 6).

As to claim 12, this claim is rejected based on arguments given above for rejected claim 6 and is similarly rejected including the following:

Adachi teaches:

“wherein said display information generating part generates the Web page displaying the Web information or the other Web information generated by said Web information generating part or said other Web information generating parts, by number of letters suitable for the terminal, based on the common path information indicating at least one of the terminal type information, language information or profile information set based on the reference path in common” (see Detailed Description, [0025] wherein the disclosure of changing into URL of the

Art Unit: 2164

page of the optimal amount of information is equivalent to Applicant's claim language; see [0033] for the generating of Web page).

As to claim 14, Adachi teaches:

“An information processing method” (see Abstract and Detailed Description [0011] and [0015]) comprising:

“specifying at least one of a terminal type, language or profile of a terminal connected through a network based on a first requesting Web information, said first request sent from the terminal through the network” (see Detailed Description, [0013]-[0015] and [0018] and Drawing 5, client is equivalent to Applicant's “terminal”, and the URL acquisition demand from a client is equivalent to Applicant's “first request sent from the terminal”);

“generating reference Web information that includes a reference path created by adding common path information indicating at least one of a terminal type information, profile information showing at least one of the specified terminal type language or profile to a path indicated in the first request for accessing the Web information and that allows the terminal automatically accesses to the reference path” (see Detailed Description, [0013]-[0014] and [0018], and URL information or URL of the conversion result generated by the URL converter is equivalent to Applicant's “reference Web information”; see [0018], [0020], [0023]-[0025] and Drawing 5, wherein the converted or changed URL is equivalent to Applicant's “reference path”; see [0023] and [0029]-[0032] which disclose that appropriate Web information is automatically accessed using the returned URL wherein returned URL is equivalent to Applicant's “reference path”); and

Art Unit: 2164

“sending the reference Web information to the terminal as a response with respect to the first request, and receiving a second request for requesting the Web information specified by the reference path” (see Detailed Description, [0013]-[0014] discloses a means for returning the URL information after conversion to said client wherein the converted URL information is equivalent to Applicant’s “the reference Web information”, and URL acquisition demand from a client is equivalent to Applicant’s “first request”; see [0029]-[0032] wherein each of retrieved URL is equivalent to Applicant’s “reference path”, and a mouse button click on any link of the result URL list is equivalent to second request as illustrated in Applicant’s claim language).

As to claim 15, this claim is rejected based on arguments given above for rejected claim 14 and is similarly rejected including the following:

Adachi teaches:

“generating a Web information” (see Detailed Description, [0023] and [0033]-[0034] wherein information such as image or document is Web information); and

“generating a Web page by describing the Web information corresponding to the terminal in a display format for display the Web information at the terminal based on the common path information indicating at least one of the terminal type information, language information or profile information obtained from the reference path indicated by the second request” (see Detailed Description [0023], [0027], [0033] and [0037]).

As to claim 29, this claim is rejected based on arguments given above for rejected claim 1 and is similarly rejected including the following:

Adachi teaches:

“a profile reference Web information generating part specifying a profile requested by a profile change request to change the profile with respect to Web information display at the terminal, said profile change request sent from the terminal through the network, and generating profile reference Web information that includes a profile reference path created by setting profile information showing the specified profile to a path for accessing the Web information and that allows the terminal to automatically accesses to the profile reference path” (see Detailed Description, [0012]-[0015], [0024]-[0027], [0029]-[0032], and Drawing 5 and 6 wherein URL acquisition demand to change URL information according profile information (such as user’s age, user name, an affiliation organization, etc)is equivalent to Applicant’s “profile change request”, converted or changed URL information is equivalent to Applicant’s “profile reference Web information”, returned URL is equivalent to Applicant’s “profile reference path”);

“a communicating part sending the profile reference Web information to the terminal as a response with respect to the profile change request, and receiving an auto-accessed request for requesting the Web information suitable for the profile by the profile reference path” (see Detailed Description, [0013]-[0015] discloses a means for returning the URL information after conversion to said client wherein the converted URL information regarding user’s profile (such as a user’s age, a user’s executive, a user name, etc) is equivalent to Applicant’s “the profile reference Web information” and client is equivalent to Applicant’s “terminal”, which indicates the inclusion of a communicating part as illustrated in Applicant’s claim language; see [0029]-[0032] wherein each of retrieved URL is equivalent to Applicant’s “profile reference path”, and a mouse button click on any link of the result URL list is equivalent to an auto-accessed request

Art Unit: 2164

as illustrated in Applicant's claim language, and a communicating part must be included to communicate and respond to the request as disclosed);

“an authenticating part authenticating the user of the terminal when the auto-accessed request is received and allowing to provide the Web information suitable for the profile indicated in the profile reference path based on an authentication result” (see Detailed Description, [0027] wherein log-in is a way to authenticating the user of the terminal as illustrated in Applicant's claim language).

As to claim 30, this claim is rejected based on arguments given above for rejected claim 29 and is similarly rejected including the following:

Adachi teaches:

“a Web information generating part generating a Web information” (see Detailed Description, [0023] wherein the disclosure of the image for accessing in the Web indication the inclusion of a Web information generating part as illustrated in Applicant's claim language; also see [0033] for information accessible by URL); and

“a display information generating part generating a Web page by describing the Web information corresponding to the terminal in a display format for display the Web information at the terminal based on the profile information obtained from the reference path indicated by the auto-accessed request” (see Detailed Description, [0023] and [0033] wherein conversion program functions as a display information generating part as illustrated in Applicant's claim language; also see [0027] for the disclosure of individual humanity news based on a user's age, executive, and user ID).

As to claim 33, this claim is rejected based on arguments given above for rejected claim 14 and is similarly rejected including the following:

Adachi teaches:

“specifying a profile requested by a profile change request to change the profile after the profile is request, with respect to Web information display at the terminal, said profile change request sent from the terminal through the network, and generating profile reference Web information that includes a profile reference path created by setting profile information showing the specified profile to a path for accessing the Web information and that allows the terminal to automatically accesses to the profile reference path” (see Detailed Description, [0012]-[0015], [0024]-[0027], [0029]-[0032], and Drawing 5 and 6 wherein URL acquisition demand to change URL information according profile information (such as user’s age, user name, an affiliation organization, etc)is equivalent to Applicant’s “profile change request”, converted or changed URL information is equivalent to Applicant’s “profile reference Web information”, returned URL is equivalent to Applicant’s “profile reference path”);

“sending the profile reference Web information to the terminal as a response with respect to the profile change request, and receiving an auto-accessed request for requesting the Web information suitable for the profile by the profile reference path” (see Detailed Description, [0013]-[0015] discloses a means for returning the URL information after conversion to said client wherein the converted URL information regarding user’s profile (such as a user’s age, a user’s executive, a user name, etc) is equivalent to Applicant’s “the profile reference Web information” and client is equivalent to Applicant’s “terminal”; and see [0029]-[0032] wherein

Art Unit: 2164

each of retrieved URL is equivalent to Applicant's "profile reference path", and a mouse button click on any link of the result URL list is equivalent to an auto-accessed request as illustrated in Applicant's claim language);

"authenticating the user of the terminal when the auto-accessed request is received and allowing to provide the Web information suitable for the profile indicated in the profile reference path based on an authentication result" (see Detailed Description, [0027] wherein log-in is a way to authenticating the user as illustrated in Applicant's claim language).

As to claim 34, this claim is rejected based on arguments given above for rejected claim 33 and is similarly rejected including the following:

Adachi teaches:

"generating a Web information" (see Detailed Description, [0023] wherein the disclosure of the image for accessing in the Web indication the inclusion of a Web information generating part as illustrated in Applicant's claim language; also see [0033] for information accessible by URL); and

"generating a Web page by describing the Web information corresponding to the terminal in a display format for display the Web information at the terminal based on the profile information obtained from the reference path indicated by the auto-accessed request" (see Detailed Description, [0023] and [0033] wherein conversion program functions as a display information generating part as illustrated in Applicant's claim language; also see [0027] for the disclosure of individual humanity news based on a user's age, executive, and user ID).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 5 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adachi (Japanese Publication No 2000-285052) as applied to claim 4 above, and further in view of Chen et al. (US Publication No US 2003/0020746).

As to claims 5 and 10, these claims are rejected based on arguments given above for rejected claim 4 and are similarly rejected including the following:

Adachi does not teach “an XML describing part describing the web information generated by said Web information generating part and the common path information indicating at least one of the terminal type information, language information or profile information in an extensible markup language”; and

“an HTML converting part generating the Web page by converting the Web information described in the extensive markup language into a hypertext markup language in accordance with a style sheet corresponding to the Web information based on at least one of the terminal type information, language information or profile information”.

Chen et al. teach “an XML describing part describing the Web information generated by said Web information generating part and the common path information indicating at least one of the terminal type information, language information or profile information in an extensible markup language” (see Chen et al., [0033] and [0035], and Adachi, [0012]-[0015]); and

“an HTML converting part generating the Web page by converting the Web information described in the extensible markup language into a hypertext markup language in accordance with a style sheet corresponding to the Web information based on at least one of the terminal type information, language information or profile information” (see Chen et al., [0035]-[0037] wherein XSL file is equivalent to Applicant’s “style sheet”, and see Adachi, [0012]-[0015]).

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Adachi by the teaching of Chen et al., because adding an XML describing part describing the Web information generated by said Web information generating part and the common path information indicating at least one of the terminal type information, language information or profile information in an extensible markup language provides an effective way to integrate Web data from a variety of sources since XML is a uniform language suitable for representing information (see Chen et al., [0023] and [0033]), and adding an HTML converting part generating the Web page by converting the Web information described in the extensible markup language into a hypertext markup language in accordance with a style sheet corresponding to the Web information based on at least one of the terminal type information, language information or profile information provides an effective way for representing information to a user since HTML format is a format suitable for representation to a user (see Chen et al., [0035]).

As to claim 10, this claim is rejected based on arguments given above for rejected claim 5 and is similarly rejected including the following:

Adachi as modified teaches:

“wherein said display information generating part generates the Web page by additionally providing an image to the Web information or the other Web information generated by the Web information generating part or the other Web information generating part, based on the common path information indicating at least one of the terminal type information, language information or profile information set based on the reference path in common” (see Detailed Description, [0023]-[0025]).

10. Claims 7, 8 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adachi (Japanese Publication No 2000-285052) as applied to claim 6 above, and further in view of Watson et al. (Publication No US 2004/0049574).

As to claim 7, this claim is rejected based on arguments given above for rejected claim 6, and is similarly rejected including the following:

Adachi does not teach:

“A Web frame information generating part setting relative paths for the Web information and the other Web information to display for each of a plurality of frames, and generating Web frame information defining the plurality of frames to divide the Web page”,

Watson et al. teach:

Art Unit: 2164

“a Web frame information generating part setting relative paths for the Web information and the other information to display for each of a plurality of frames, and generating Web frame information defining the plurality of frames to divide the Web page” (see [0073]-[0076] and Fig. 5A-C wherein “panes” is equivalent to Applicant’s “frames” and layout for the web page as disclosed implies the inclusion of functions equivalent to Applicant’s “Web frame information generating part”).

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Adachi by the teaching of Watson et al. to include a Web frame information generating part, since adding a Web frame information generating part setting relative paths for the Web information and other Web information to display for each of a plurality of frames and generating Web frame information defining the plurality of frame to divide the Web page would provide a powerful tool to display data from different sources. As a result, data navigation is more effective.

Adachi as modified teaches:

“wherein said reference Web information generating part generates the reference web information that includes the reference path to access the Web frame information created by adding the common path information indicating at least one of terminal type information, language information or profile information to a path for the Web frame information and that allows the terminal to automatically access to the reference path” (see Detailed Description, [0013]-[0014] and [0018] wherein URL inverter or converter is equivalent to Applicant’s “reference Web information generating part”, and URL information or URL of the conversion result is equivalent to Applicant’s “reference Web information”; see [0020], [0023]-[0025] and

Art Unit: 2164

Drawing 5, wherein the converted or changed URL is equivalent to Applicant's "reference path"; see [0023] and [0029]-[0032] which disclose that appropriate Web information is automatically accessed using the returned URL wherein returned URL is equivalent to Applicant's "reference path"), and

"when said communicating part sends the reference Web information to the terminal as response to the first request and receives the second request requesting the Web frame information by the reference path from the terminal, said Web frame information generating part is executed" (see Detailed Description, [0013]-[0014] discloses a means for returning the URL information after conversion to said client wherein the converted URL information is equivalent to Applicant's "the reference Web information", which indicates the inclusion of a communicating part as illustrated in Applicant's claim language; see [0029]-[0032] wherein each of retrieved URL is equivalent to Applicant's "reference path", and a mouse button click on any link of the result URL list is equivalent to second request as illustrated in Applicant's claim language, and a communicating part must be included to communicate and respond to the request as disclosed).

As to claim 8, this claim is rejected based on arguments given above for rejected claim 7, and is similarly rejected including the following:

Adachi as modified does not teach:

"wherein said display information generating part disables the Web frame information generating part based on the common path information indicating at least one of the terminal type information, language information or profile information obtained from the reference path

indicated in the second request, and generates the Web page that allows the terminal directly access the Web information by a relative path for the Web information requested by the first request”.

Watson et al. teach:

“wherein said display information generating part disable the Web frame information generating part based on the terminal type information obtained from the reference path indicated in the second request, and generate the Web page that allows the terminal to directly access the Web information by a relative path for the Web information requested by the first request” (see e.g., [0073] and [0077] disclose that the layout for a web page include multiple panes on a Web page(“panes” is equivalent to Applicant’s “frames”) when displaying on a PC or TV screen or PDA, but same document is displayed on WAP telephone as including single pane decks, which implies the Web frame information generating part must be disabled based on the terminal type information, and single pane decks as disclosed allowed the terminal to directly access the Web information by a relative path as illustrated in Applicant’s claim language; also see [0160]; also see Adachi, [0023] and [0033] wherein conversion program is equivalent to Applicant’s “display information generating part”).

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Adachi by the teaching of Watson et al. since adding the feature of disabling the Web frame information generating part based on the common path information indicating at least one of the terminal type information, language information or profile information obtained from the reference path provide an effective way to control the use of web frames only on terminals suitable for such frame display.

As to claim 13, this claim is rejected based on arguments given above for rejected claim 7, and is similarly rejected including the following:

Adachi as modified do not teach “said reference Web information generating part, said Web information generating part, said other Web information generating part, and Web frame information generating part are programs developed by C language”.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Adachi by implementing the invention of Adachi using C language because programs written in C language are easily adapted to new environments since C language is a dominant language in systems and microcomputer applications programming, and moreover using any effective language to implement a program is a decision of choice.

Conclusion

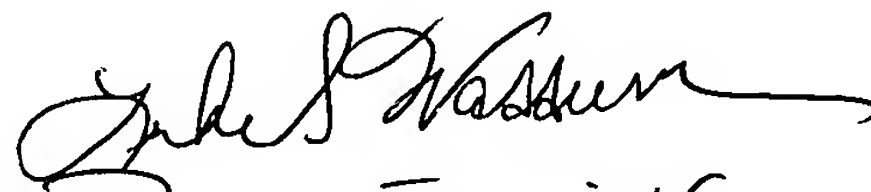

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuong-Thao Cao whose telephone number is (571) 272-2735. The examiner can normally be reached on 8:30 AM - 5:00 PM (Mon - Fri).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Rones can be reached on (571) 272-4085. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
